Minna

## EDUCATION

### B.Tech

Federal University Of Technology Minna Gidan Kwano  
Campus  
2021 - 2026

## WORK EXPERIENCE

### Junior Fullstack Developer

Devengine Technology, Virtual  
Job • Nov 2023 - Present (6 months)

Learnt new API architectures like gRPC and also understood how microservices essentially work and how they can communicate using Apache Kafka or Rabbitmq. Built APIs that are well documented and scalable.

### Lead Backend Developer

Bunzitech, Virtual  
Job • Jan 2023 - Present (1 year 4 months)

I learnt a lot about how APIs work in real world, building one of my most complex APIs. I followed standard API guidelines to build scalable and secured APIs.

## POSITIONS OF RESPONSIBILITY

Mostly help out fellow developers who are stuck, helping them fix bugs.

## PROJECTS

### Auctioneer

May 2023 - Jul 2023  
<https://github.com/codewitgabi/auctioneer>

A virtual environment for auctioning lots. Bidders place bids in real time. I was able to enhance my skill with django, django channels and django rest framework. Also worked on the nice looking UI using pure html and css and well written JavaScript.

### cloudvault

Jun 2023 - Jun 2023  
<https://pypi.org/project/cloudvault/1.1/>

Cloudvault is a django package I built to manage file uploads. It easily integrates the clouinary platform into django and uses it as a default file upload storage. It was built for personal use but can be used in place of AWS's S3 bucket.

### django-email-certify

Jun 2023 - Jun 2023

<https://pypi.org/project/django-email-certify/1.0/>

A django package to verify user's email on registration. Package is officially released on PyPi; python's package repositories.

### Django Group Chat

Feb 2023 - Feb 2023

<https://github.com/codewitgabi/Django-GroupChat-tutorial>

A tutorial project is used to teach my student how the django framework works. Later went further to add django channels to make it more interactive.

### Django Email Verification

Jan 2023 - Jan 2023

<https://github.com/codewitgabi/DjangoEmailVerification>

A django application that verifies a user's email after registration. Also added a thread to clean the database if registration is not completed after 24hours.

### E-commerce application

Aug 2022 - Sep 2022

[https://github.com/codewitgabi/django\\_ecommerce\\_website](https://github.com/codewitgabi/django_ecommerce_website)

An ecommerce website built with HTML, CSS, JavaScript, Django. Featuring user authentication and add to cart functionality. It's a great piece I built during my learning days.

ADDITIONAL DETAILS

I'm a web developer focusing my energy on backend development. I pride myself in building scalable and secured backend applications. I'm always ready to up my skills and become better than I was.

Created a django package to manage file uploads quickly and swiftly. cloudvault is one of my biggest accomplishments in backend development.
